**DECKING PROFILE – 51/ 317**

Composite Floor Deck is a steel deck with a ribbed profile, which binds with concrete slab and together forms a part of the floor structure. This interlocking between the concrete and the floor deck is brought about through a system of embossment and ribs which are built into the deck, creating a reinforced concrete slab that serves the dual purpose of permanent form and positive reinforcement. Composite decking is one of the most effective methods of constructing floors in steel building and very useful in high rise RCC / Steel Buildings.

## APPLICATIONS

- ♦ High Rise Buildings
- ♦ Multiplexes / Commercial Buildings
- ♦ Power Plant Buildings
- ♦ Office Buildings
- ♦ Mezzanine Floors in Industrial Buildings
- ♦ Warehouses
- ♦ Industrial Buildings Multi-Storeyed Buildings
- ♦ Supermarkets / Malls
- ♦ SEZs
- ♦ Storage Sites
- ♦ Bridges
- ♦ Walkways and Platforms
